

UNIVERSITY OF THE INCARNATE WORD

HSI: Battle of the Brains 2026

Executive Summary: NARAH

Team Captain: Horacio Viramontes

Team Members: Rhual Aranzabal, Alejandra Padilla, Analía Gracia, Nathan Castro

Executive Summary

NARAH is a business to business subscription platform founded by five University of the Incarnate Word students in finance, international business and data analytics. Our customers are large U.S. companies and retailers that sell physical products and are losing website traffic as shoppers turn to AI. programs. Companies subscribe monthly or annually to a Bronze, Silver, or Gold membership, priced from \$299 to \$5,000+ per month. Each tier increasingly adds deeper customer insights, more frequent website crawling and stronger AI guardrails.

With AI-driven traffic to retail sites growing 127% year over year in August 2026, and users clicking traditional search results in only 8% of searches that show an AI summary, NARAH addresses the growing gap between companies losing visibility and traffic they can't measure. It also mitigates the risk of consumers making purchasing decisions based on outdated or unreliable product information. NARAH addresses both of these problems by connecting participating companies with shoppers through their AI assistant of choice, while also providing business with valuable marketing insights.

OBJECTIVES TO MEASURE SUCCESS:

- +5 percentage points in a client's AI shopping inclusion rate within 90 days
- 95% or more of tracked product facts stated correctly across AI assistants
- 10% fewer returns and support tickets tied to AI misinformation during the pilot
- 50,000 shoppers using the NARAH connector in the first year

SOLUTION: NARAH works on two sides of the same problem. For shoppers, the idea is simple: instead of downloading a new app, they connect NARAH to the AI assistant they already use, like ChatGPT or Claude. When they ask about a product, the assistant pulls its answer from verified information on official company websites and authorized retailers rather than from random forum posts, outdated listings, or unreliable third-party sites. That means shoppers get accurate specs, prices, and availability without having to double-check everything themselves. For companies, NARAH provides a dashboard that pulls data from product feeds, web crawlers, and APIs to show how their brand is performing in AI search. They can see how often AI assistants recommend their products, how many customers are reaching their site through those recommendations, and which products are being overlooked or described inaccurately, so they know exactly where to improve. Supporting all of this is our AI Guardrail framework, which only accepts information from verified sources, protects personal data, follows FTC privacy guidance, and continuously monitors for bias so that no brand gets an unfair advantage and shoppers can trust what they are being told.

CONCLUSION: We are seeking \$175,000 in seed funding from Alamo Angels, which covers development and our first-year "loss" of \$121,100. NARAH becomes profitable in Year 2, earning \$70,700 on 40 clients and growing to \$434,000 on 100 clients in Year 3. For a mid-size brand, the added AI-driven sales are worth roughly 35 times the cost of a Growth plan. NARAH turns AI shopping from a blind spot into a channel companies can measure and grow, and one shoppers can trust.
